

RAILFLOW

Description

As punctuality is highly regarded in Switzerland, our program is dedicated to **analyzing delays at any stations**. We accomplished this by examining a dataset and calculating the difference between scheduled and actual departure times.

Benefits of our program

- ❖ Find stations with the highest occurrence of delays.
- ❖ Compare delays of different weeks.
- ❖ Create a graph of the delays in one week.
- ❖ Get in-depth analysis of the delay trends at any station.
